 Include all of the below conditional assessments, if medically indicated, as part of a dysphagia consultation including the MBSS-comprehensive consult for medically complex patients
-Esophageal scan-approx. 30% of pts have asymptomatic esophageal dysphagia, view esophageal emptying into stomach
-Vocal cord assessment-for closure to protect against aspiration
-Mandibular/dental assessment-for structural integrity/abnormalities and function for chewing/muscular support to evaluate risk for choking with solids to determine appropriate diet level
-Cervical spine/soft tissue assessment-for structural integrity/abnormalities and function, changes can lead to redirection of bolus increasing risk of aspiration and requiring a different level of strategy use
-Frontal chest view-for aspiration when aspiration occurs, allows for a risk stratification for aspiration pneumonia
-Physician consult requested for dysphagia-impact of po intake on prognosis, impact of medication and anatomy, quality of life and rehab candidacy discussion, recommendations for further consult
